TaskFlow – Terms and Conditions & Privacy Notice

Last Updated: 2026-02-04

This document outlines the terms and conditions of use for TaskFlow, as well as important information about how user data is handled. By accessing or using TaskFlow, you agree to comply with the following terms.

1. Overview

TaskFlow is a full-stack minimalistic-focused productivity web application that allows users to manage tasks, set reminders, and track progress. Although the app is deployed and available for use, it remains a non-commercial portfolio project created for educational and demonstration purposes. Users should be aware that the application may not meet the security or compliance standards of enterprise-grade software.

2. **Authorship**

TaskFlow is an original project developed solely by Angel Valentino. All design, development, backend implementation, deployment, and associated materials were completed independently as part of a personal portfolio and educational project.

The front-end code is open source and available here for review, reuse, or contribution.

3. User Accounts and Responsibilities

To access the core features of TaskFlow, users are required to create an account using a valid email, password, and username. By registering an account, you agree to:

- Provide accurate and truthful information.
- Keep your login credentials secure and confidential.
- Notify the developer promptly of any unauthorized use or security concern.

Users must not engage in abusive behavior, attempt to exploit or disrupt the application, or access the data of other users.

4. Privacy Notice

TaskFlow collects and stores the following personal information during the account registration process:

- **Username**
- **Email address**
- **Password** (securely stored using hashing algorithms)

This information is used exclusively for account authentication and user identification within the app. TaskFlow does not collect any other personal data, does not track user behavior, and does not share or sell information to third parties.

Although the app follows reasonable security practices, including hashed password storage and JWT-based authentication, TaskFlow is still in a portfolio and development context. Users should understand that no system is completely secure and that by using TaskFlow, they accept any risks associated with potential vulnerabilities or data exposure.

5. Security Disclaimer

While the app implements industry-standard authentication methods and security best practices, it is still a personal project and may not undergo the same level of security auditing as commercial applications. Users should use the application with this understanding and avoid storing sensitive or critical information within it.

6. Limitation of Liability

TaskFlow is provided "as is" and "as available." No warranties, either express or implied, are made regarding the app's performance, reliability, or security. The developer shall not be held liable for any loss, damage, or harm arising from the use of the application, including data loss, unauthorized access, or system failures.

7. Modifications to the Terms

These terms may be revised periodically. Users will be notified within the application if significant changes are made. Continued use of TaskFlow after updates indicates acceptance of the revised terms.

8. Contact

For questions or concerns about these terms, how your data is managed, the purpose and limitations of the application, or potential collaboration, please reach out to:
